

Entrepreneurship II  
Randice Nelson

3/16-3/20

	Goals for the week	Objectives	Lesson
Monday	To analyze and evaluate the foundational principles of supply chain and production management by applying concepts such as input sourcing, production methods, supplier selection, distribution logistics and value creation to real-world and startup business scenarios.	1. To identify the knowledge and materials needed to create a product or service. 2. To identify production options for digital and physical products and services. 3. To identify quality control testing processes for digital and physical products and services. 4. To adhere to government regulations and safety requirements. 5. To select suppliers to produce goods and services. 6. To analyze risks and challenges with supply chain management and distribution. 7. To determine distribution costs associated with transportation, storage, product handling and inventory control. 8. To explain how distribution adds value to a product or service by providing place, possession and time utility to a consumer.	- Global Supply Chain Map Project
